

T-Coat™

Low Friction Colored Coatings

Precision Associates' T-Coat™ is a resin bonded PTFE based dry film lubricant. Designed especially for rubber seals, this flexible coating is available in a number of colors. T-Coat™ may be applied to O-Rings, U-Cups, X-Rings and other rubber seals made in most common polymers.

The benefits of T-Coat™ PTFE coatings include:

- Easier seal installation, even while using automatic feeder systems
- Low initial breakaway friction after extended non-use
- Much cleaner than oils or greases
- Unlike oils and greases, will not cause swell or shrink of rubber compounds

Precision Associates' T-Coat™
is available in medium and dark blue colors.

Please contact your Precision Associates customer service representative for pricing or additional information regarding T-Coat™.
